

# Vertical Market Profiles

Below is a small sample of projects designed, installed and serviced by one of our six (6) locations. For more specific information on a project, contact any VTI Security office via our website: [www.vtisecurity.com](http://www.vtisecurity.com).

## **Financial Services / Professional Service**

- High profile, high security, independent organization within the Government carrying a truly integrated system with program rich control functions and requiring heavy custom engineering. This site located in downtown Minneapolis has 250 card readers, 350 cameras and 115 intercoms.

## **Government / Counties**

- 1775 video cameras, 2844 access control points, 226 intercoms located in over 48 county facilities. VTI designed, installed and supports the command and control center. VTI software engineers have written and maintained GUI interface(s) between all systems.

## **Corrections**

- Large IP video system deployed at 10 correctional facilities to record video throughout the state. The system is currently recording 2,500 cameras with plans for expansion. Future plans for centralized management of the system will allow for multiple levels of redundancy at each site.

## **Commercial**

- 185 card readers, 100 cameras and 50 intercoms installed throughout three office buildings and one parking ramp all running back to one Security Operations Center. This campus is managed by a large, national, property management firm.

## **Healthcare**

- A 600 camera system, 1500 access control points, 150 intercoms and an elaborate command and control center installed in a comprehensive, academic medical center and public hospital. VTI software

engineers have written and maintained GUI interface (s) between all systems.

## **Education**

- 1<sup>st</sup> phase: 35 card readers in 10 elementary schools and district office built to encompass an IP based access control system. This system was built with intent for expansion in to secondary schools with a modular design and browser based platform for remote administration for anywhere an employee has access to the network and required credentials.
- 800+ camera system in district wide deployment utilizing digital video recording in 68 school locations. The system was built around a migration strategy to provide a full IP video solution through a single user interface and video management software

## **Universities**

- A 50,000 student population recently completed a voice intercom project with VTI. The system consists of thirteen (13) facilities all network connected for voice communication. As part of the project, CCTV was added as a means of visual verification.
- Recently deployed the first phase of a campus wide IP video solution. This phase encompassed eight (8) facilities with inside video and campus wide outside video. Client's intention is to have all facilities monitored on their IP video network.
- State college with 80+ IP cameras throughout the campus grounds and several buildings. The system is integrated with the emergency telephones for faster response to emergency situations. Use of megapixel cameras and graphic interface allow for greater efficiency and response by the security department.
